EXPERIENCE

- **Microsoft** 

Senior Software Engineer

Remote, Brazil

Mar. 2025 – Present

Software Engineer II

Jul. 2022 – Mar. 2025

 - Worked on a geographically distributed team delivering features on the voice assistant in Outlook Android app.
 - Enabled consistent Microsoft Copilot experience across multiple mobile apps by developing an SDK using **Jetpack Compose**,
 - Improved code maintainability by adapting a callback-based SDK to **Kotlin Flow**, simplifying the codebase.
 - Optimized code review workflow by integrating a common set of static analysis and lint rules across all libraries on the project, enabling reviews to focus on architecturally significant decisions rather than small details.
 - Achieved a 57% improvement in CI pipeline performance by identifying and decomposing independent work into parallel jobs and properly configuring **Gradle** builds.
- **iFood** 

Android Developer II

Remote, Brazil

Apr. 2022 – Jul. 2022

 - Improved developer experience and productivity by implementing a dependency injection model for checkout plugins, replacing the previously, inefficient, manual injection approach.
 - Improved user engagement and feature adoption by implementing dynamic onboarding feature, allowing PMs to control the order and timing of onboarding based on remote configs and plugin availability.

Android Developer I

May. 2021 – Apr. 2022

 - Worked at the checkout team on a **single-activity**, plugin-based architecture based on **Dagger**.
 - Created a script to manage code ownership, making the process less error-prone given the frequency teams structure changes.
- **Meta (Consulting Company)** 

Android Developer

Remote, Brazil

Sep. 2020 – May. 2021

 - Delivered a digital wallet and credit card rewards app for a major bank in Brazil, using Coroutines and **Koin**, while also integrating a code coverage tool into the app's **multi-module** structure to enhance maintainability and testing.
 - Enhanced app security by implementing a digital signature subsystem for all HTTP requests using **OkHttp interceptors**.
 - Designed a testable biometric authentication abstraction adapting the original callback syntax to coroutines.
- **State Secretariat for Penitentiary Administration of Maranhão (SEAP-MA)** 

Mid-level Developer

São Luís - MA, Brazil

Jul. 2020 – Sep. 2020

 - Significantly enhanced system security by proactively identifying and eliminating critical SQL injection vulnerabilities,

Entry-level Developer

Sep. 2019 – Jul. 2020

 - Enhanced system maintainability by developing a **Spring Boot** backend with **MongoDB**, creating a unified and flexible API for history tracking across multiple systems, simplifying feature development and eliminating numerous legacy history tables.
 - Ensured compliance with legal requirements and avoided significant fines during the COVID-19 pandemic by enabling families to schedule virtual visits with incarcerated relatives through a **Clean Architecture** Android app using **Kotlin** and **Coroutines**.
- **Laboratory of Intelligent Distributed Systems (LSDi)** 

Intern

São Luís - MA, Brazil

Apr. 2017 – Jul. 2019

 - Designed and implemented an IoT solution for building occupancy detection, using Android devices and **Arduino**-powered BLE beacons to identify interactions. Events were processed and published to a backend system built with **Spring Boot**, leveraging **Retrofit**.

PROJECTS & PUBLICATIONS

- **Resume** : The tool that built the resumé that you are reading right now.
- **Cirilo's Algorithm** : An algorithm for finding the smallest pair of values between two unsorted arrays.
- **Jetpack Compose – Don't throw your presenters off** : Article about using model-view-presenter (MVP) on Jetpack Compose.
- **Internet of Things Applied to Presence and Meeting Management of People in Smart Buildings** : Paper on mobile computing and IoT.

EDUCATION

- **Federal University of Maranhão (UFMA)** 

BSc. in Computer Science

São Luís - MA, Brazil

2013 – 2019
