### **Experience**

Microsoft <sup>☑</sup> Remote, Brazil

SENIOR SOFTWARE ENGINEER Mar. 2025 – Present

SOFTWARE ENGINEER II

Jul. 2022 – Mar. 2025

- Worked on a geographically distributed team delivering features on the voice assistant in Outlook Android app.
- Enabled consistent Microsoft Copilot experience across multiple mobile apps by developing an SDK using **Jetpack Compose**,
- · Improved code maintainability by adapting a callback-based SDK to Kotlin Flow, simplifying the codebase.
- Optimized code review workflow by integrating a common set of static analysis and lint rules across all libraries on the project, enabling reviews to focus on architecturally significant decisions rather than small details.
- Achieved a 57% improvement in CI pipeline performance by identifying and decomposing independent work into parallel jobs and properly
  configuring Gradle builds.

iFood <sup>☑</sup> Remote, Brazil

ANDROID DEVELOPER II

Apr. 2022 – Jul. 2022

- Improved developer experience and productivity by implementing a dependency injection model for checkout plugins, replacing the previously, inefficient, manual injection approach.
- Improved user engagement and feature adoption by implementing dynamic onboarding feature, allowing PMs to control the order and timing of onboarding based on remote configs and plugin availability.

Android Developer I May. 2021 – Apr. 2022

- · Worked at the checkout team on a single-activity, plugin-based architecture based on Dagger.
- Created a script to manage code ownership, making the process less error-prone given the frequency teams structure changes.

#### Meta (Consulting Company) □

Remote, Brazil

Android Developer

Sep. 2020 - May. 2021

- Delivered a digital wallet and credit card rewards app for a major bank in Brazil, using Coroutines and **Koin**, while also integrating a code coverage tool into the app's **multi-module** structure to enhance maintainability and testing.
- Enhanced app security by implementing a digital signature subsystem for all HTTP requests using **OkHttp interceptors**.
- Designed a testable biometric authentication abstraction adapting the original callback syntax to coroutines.

#### State Secretariat for Penitentiary Administration of Maranhão (SEAP-MA)

São Luís - MA, Brazil

MID-LEVEL DEVELOPER

Jul. 2020 - Sep. 2020

• Significantly enhanced system security by proactively identifying and eliminating critical SQL injection vulnerabilities,

ENTRY-LEVEL DEVELOPER

Sep. 2019 - Jul. 2020

- Enhanced system maintainability by developing a **Spring Boot** backend with **MongoDB**, creating a unified and flexible API for history tracking across multiple systems, simplifying feature development and eliminating numerous legacy history tables.
- Ensured compliance with legal requirements and avoided significant fines during the COVID-19 pandemic by enabling families to schedule virtual visits with incarcerated relatives through a **Clean Architecture** Android app using **Kotlin** and **Coroutines**.

#### Laboratory of Intelligent Distributed Systems (LSDi) <sup>™</sup>

São Luís - MA, Brazil

INTERN

Apr. 2017 – Jul. 2019

Designed and implemented an IoT solution for building occupancy detection, using Android devices and Arduino-powered BLE beacons to
identify interactions. Events were processed and published to a backend system built with Spring Boot, leveraging Retrofit.

## **Projects & Publications**

- **Resume** . The tool that built the resumé that you are reading right now.
- Cirilo's Algorithm ': An algorithm for finding the smallest pair of values between two unsorted arrays.
- Jetpack Compose Don't throw your presenters off L: Article about using model-view-presenter (MVP) on Jetpack Compose.
- Internet of Things Applied to Presence and Meeting Management of People in Smart Buildings . Paper on mobile computing and IoT.

#### **Education**

#### Federal University of Maranhão (UFMA) <sup>™</sup>

São Luís - MA, Brazil

BSc. in Computer Science 2013 – 2019
