#### EXPERIENCE

• Microsoft <sup>L'</sup> Remote, Brazil

Senior Software Engineer

Mar. 2025 - Present

- Transitioned from Android to web, working on Microsoft Copilot with React and TypeScript.
- o Built a performance dashboard using KQL and Azure Data Explorer, improving visibility into latency across system layers.
- Reduced perceived loading time by preloading home content earlier in the app lifecycle.
- Enabled shadow traffic for a critical service, allowing backend teams to validate infrastructure and catch a production-blocking bug pre-launch.

Software Engineer II Jul. 2022 – Mar. 2025

- o Worked on a geographically distributed team delivering features on the voice assistant in Outlook Android app.
- o Enabled consistent Microsoft Copilot experience across multiple mobile apps by developing an SDK using Jetpack Compose,
- o Improved code maintainability by adapting a callback-based SDK to Kotlin Flow, simplifying the codebase.
- Optimized code review workflow by integrating a common set of static analysis and lint rules across all libraries on the project, enabling reviews to focus on architecturally significant decisions rather than small details.
- Achieved a 57% improvement in CI pipeline performance by identifying and decomposing independent work into parallel jobs and properly configuring **Gradle** builds.

• iFood <sup>[2]</sup> Remote, Brazil

Android Developer II Apr. 2022 – Jul. 2022

- Improved developer experience and productivity by implementing a dependency injection model for checkout plugins, replacing the previously, inefficient, manual injection approach.
- o Improved user engagement and feature adoption by implementing dynamic onboarding feature, allowing PMs to control the order and timing of onboarding based on remote configs and plugin availability.

Android Developer I May. 2021 – Apr. 2022

- Worked at the checkout team on a **single-activity**, plugin-based architecture based on **Dagger**.
- o Created a script to manage code ownership, making the process less error-prone given the frequency teams structure changes.

## • Meta (Consulting Company) <sup>™</sup>

Remote, Brazil

Android Developer

Sep. 2020 – May. 2021

- Delivered a digital wallet and credit card rewards app for a major bank in Brazil, using Coroutines and Koin, while also integrating a
  code coverage tool into the app's multi-module structure to enhance maintainability and testing.
- Enhanced app security by implementing a digital signature subsystem for all HTTP requests using **OkHttp interceptors**.
- o Designed a testable biometric authentication abstraction adapting the original callback syntax to coroutines.

## • State Department of Penitentiary Administration (SEAP-MA) <sup>™</sup>

São Luís - MA, Brazil

Mid-level Developer

Jul. 2020 – Sep. 2020

Significantly enhanced system security by proactively identifying and eliminating critical SQL injection vulnerabilities,

Entry-level Developer Sep. 2019 – Jul. 2020

• Enhanced system maintainability by developing a **Spring Boot** backend with **MongoDB**, creating a unified and flexible API for

- history tracking across multiple systems, simplifying feature development and eliminating numerous legacy history tables.

   Ensured compliance with legal requirements and avoided significant fines during the COVID-19 pandemic by enabling families to
- Ensured compliance with legal requirements and avoided significant fines during the COVID-19 pandemic by enabling families to schedule virtual visits with incarcerated relatives through a Clean Architecture Android app using Kotlin and Coroutines.

#### Projects & Publications

- **Resume** . The tool that built the resumé that you are reading right now.
- Cirilo's Algorithm . An algorithm for finding the smallest pair of values between two unsorted arrays.
- Jetpack Compose Don't throw your presenters off . Article about using model-view-presenter (MVP) on Jetpack Compose.
- Internet of Things Applied to Presence and Meeting Management of People in Smart Buildings . Paper on mobile computing and IoT.

#### EDUCATION

BSc. in Computer Science

• Federal University of Maranhão (UFMA)

São Luís - MA, Brazil

2013 - 2019
